(I)

## (57) Abstract

Compounds represented by formula (I) wherein  $N_1$  represents an atom to which a donor hydrogen atom in a hydrogen bond donor group is bonded or a hydrogen bond acceptor atom in a hydrogen bond acceptor group;  $N_3$  represents a hydrogen bond acceptor atom in a hydrogen bond acceptor group; and  $N_2$ ,  $N_4$  and  $N_5$  represent each an arbitrary carbon atom constituting a hydrophobic group; having an atom corresponding to  $N_3$  and atoms corresponding to at least two atoms selected from  $N_1$ ,  $N_2$ ,  $N_4$  and  $N_5$ , among the five atoms constituting a pharmacophore specified by the interatomic distances among  $N_1$ ,  $N_2$ ,  $N_3$ ,  $N_4$  and  $N_5$ ; and, in the optimized stereochemical structure thereof, the interatomic distances between the atom corresponding to  $N_3$  and atoms corresponding to at least two atoms selected from  $N_1$ ,  $N_2$ ,  $N_4$  and  $N_5$  fall within the scope of the pharmacophore interatomic distance, or salts thereof. Because of having an effect of inhibiting the activity of a transcription factor AP-1, these compounds are useful as preventives/remedies for diseases in which the excessive expression of AP-1 participates and as AP-1 inhibitors.
